

10 Reasons Clients Choose

NEC High Availability IT

NEC's commitment to "orchestrating a brighter world" can be seen in our Smart Enterprise solutions that provide a sound foundation to empower organizations, and improve the way people live, work and communicate. Our clients consistently tell us they selected NEC for the following reasons:

Solution Superiority

With our 'Five-9s' High Availability record (99.999% uptime), NEC's enterprise customers can avoid the customer loss, financial consequences, and damaged reputation resulting from business disruptions. Fault tolerant servers, highly secure storage, remote replication of storage, flexible networks, and software work together for a comprehensive business continuity solution that protects your mission critical operations and safeguards your private data.

Better Together

Our unique ability to combine fault tolerant server solutions with our ExpressCluster® software creates a comprehensive redundancy solution. Together, they can safely recover mission critical application services and data within minutes. Our primary storage and direct archiving backup solution also works hand in hand, for high security data protection and smooth, continuous business operations.

Disaster Recovery

NEC's disaster recovery measures are an essential safeguard against the threat of a system disruption that can impact an organization's reputation and its bottom line. With the ability to self-recover from virtually any outage, NEC's fault tolerant servers are combined with fully redundant storage solutions with 'active-active failover' and local and remote data replication for low cost disaster prevention and response. You have total protection from application failure, data corruption or hardware failure whether brought about by a natural disaster, local failure, or malicious external attacks such as virus corruption. For the Smart Enterprise, this is about securing your operations, your business critical information and applications, and your peace of mind.

Unmatched Customer Support with One Call

High Availability solutions require high availability expert support. NEC is your single service provider covering all aspects of high availability IT solutions. Directly contacting NEC results in immediate Level 3 Engineer technical support. Uniquely integrated solutions make NEC an easy 'one stop shop' and the only call necessary for expert IT advice, sales, and ongoing support.

Winning Innovation

Through the decades, our deep commitment to ongoing research and development has launched many award winning technologies, placing NEC at the forefront of Innovation leadership. In the High Availability IT arena, having identified a need for heightened business security, NEC presented the first ever Fault Tolerant servers, and also initiated the first packaged High Availability software for the Windows operating system. Changing market needs have only inspired new and creative NEC technology solutions.

6

Reduced Total Cost of Ownership (TCO)

Taking the innovative approach has created cutting edge, optimally performing High Availability solutions that are also streamlined to require minimal infrastructure and less integration, effectively reducing our customers' TCO.

Ease of Use

NEC's High Availability solution is a fully automated system with Storage Manager for a simplified user experience that can also translate to cost effectiveness for our smart enterprise customers, as measured by increased IT workforce productivity.

7

8

Flexibility and Scalability

Our solutions and services scale to our clients' business and budget requirements, and deployment is highly flexible, with integration for data centers, virtual servers, physical servers, private Cloud, and public Cloud. Whether partnering with SMB or a global enterprise, NEC's reach and insight allows for growth and expansion at your own pace.

Broad Platform and Application Support

NEC's high availability (EXPRESSCLUSTER) supports numerous types of user environments. Windows and Linux are supported as OS. The x86 servers of not only NEC but also other major hardware vendors.
