

NEC Hybrid Cloud Recovery

Powered by NEC HYDRAsstor

How confident are you your current backup solution will work for you when you really need it to? Would it be better if your recovery solution could offer much more than just a backup?

In conjunction with one of NEC's valued partners or even your IT Partner of choice, we will provide a secure, stable, resilient platform where your data is safe and always available.

NEC have combined a high performance backup target, a data archive and a tertiary (3rd tier) data storage platform, which offers you encryption, WORM and replication to the cloud to ensure compliance with local legal legislation.

There are multiple business benefits including:

- > Faster backup and, more importantly, faster recovery compared to traditional methods and pure cloud backup platforms.
- > More than just a disk based backup appliance, you can extend the life of expensive file storage systems by archiving files and cold data to the platform.

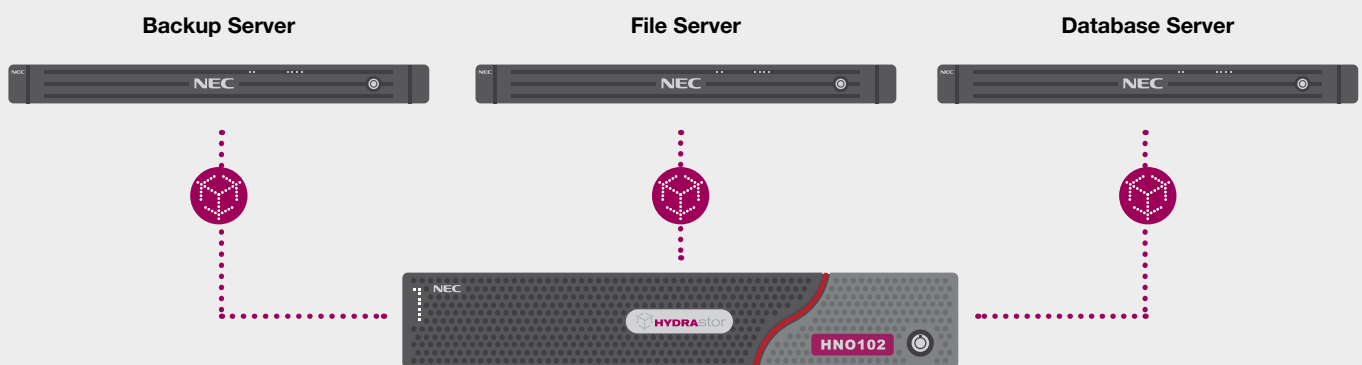

- > Improve the resilience of your data stores by having a second copy located off site.

From granular, single file restore to complete data set recovery, it just works with you, for you.

Working in conjunction with your existing file servers and data stores, it can increase the lifespan of current primary data storage systems.

"95% of companies who suffer total & critical data loss and cannot recover will either not re-open or close within 12 months"

NEC Hybrid Cloud Recovery

The NEC Hybrid Cloud Recovery Solution

Reduced Backup & Recovery Time

NEC's HYDRAsTOR is the fastest backup & recovery platform in the world today, with speeds from 10TB/hr up to a massive 6PB/hr. With a faster recovery, the cost of downtime is vastly reduced.

Scalability

NEC's Hybrid Cloud Recovery can scale from 1TB up to 150PB+ with no loss of service.

Low Cost of Entry

With NEC's Hybrid Cloud Recovery you now have the ability to select the best fit platform for your business today without the headache of having to worry about a "rip & replace" when your business needs change. Relax and know that, should the capacity grow unexpectedly, the platform can grow to match your capacity and performance requirements.

Data Security

With the rise of the data breach, security is crucial element, NEC has this in hand, your data can be secured with encryption for both data at rest and in flight.

Data Resilience

With the choice of single or multiple data stores, both on and off site, the resilience level is in your hands. Choose the level of resilience based on the needs of the business based and on the importance of the data.

Flexible

Because NEC's HYDRAsTOR is a modular design with features that can be set for each data store, you can apply the correct policy per data store. No more encryption or replication for data that the business doesn't require.

"NEC's HYDRAsTOR supports all main Backup Software vendors and is certified with Archive ISV's"

Multi-Role Platform

Most backup solutions are a single service platform, they only provide backup. NEC's Hybrid Cloud Recovery is designed to be used as not only a data recovery platform but also as a long term data archive. You can leverage the de-dupe and compression features for a file archive and 3rd tier data storage.

Always on Service

NEC understands the importance of a recovery solution to any business, with the support of our partner community, the NEC Hybrid Cloud Recovery Service is always on. Zero down-time for the service, even when scaling up the capacity or performance.
